

at Ton Sai Tower you'll find:

## PAI NOON MAI (4 pitches)

FA: Francois Burnier & Dominique Potard

90m. Bolted Jan 1997

Rebolted (and slightly altered) with  
44 stainless steel staples in March 2000

5.8  
1<sup>st</sup> PITCH: 5, 6 BOLTS, 25 M (Sorry, forgot mentioning a thread)

Stay to the right of the big rock on the  
ledge between 1<sup>st</sup> and 2<sup>nd</sup> bolts.

Don't go too far right (bare rock) at the  
somewhat runout but easy finish.

2<sup>nd</sup> PITCH: 5+, 2 THREADS, 1 BOLT, 10 M 5.8+ / 5.9-

Can be linked with the 1<sup>st</sup> pitch. Use some  
extenders or endure some ropedrag.

A 55 meter rope will get you back to the  
ground from these anchors.

3<sup>rd</sup> PITCH: 6B, 13 BOLTS, 35 M 10b/c

The real reason to climb this multipitch.

Move with caution at the easy finish,  
since the last bolt is an expansion bolt  
and potentially breaks under bodyweight...

A 60 m rope won't get you back to the  
start of the pitch, but two 60 m ropes  
(recommended - will make your life easier) will  
just get you back to the ground.

(4<sup>th</sup> PITCH: 6A+, 7 BOLTS, 2 THREADS, 22 M) 5.10 a/b

A 4-foot wedged rock after the 7<sup>th</sup> clip offers  
all the holds you need to make this pitch  
6a+ - It also may come off and kill you  
and/or cut your rope. It's also likely to cause  
some commotion at the bottom of the crag...

Climbing past it on the right up the grade  
to about 6c+. If you choose to do this  
get your second to clean the pitch. Do  
not do it from above. Consult Phi Phi  
Climbers for further information on  
the removal of this rock. Or just ask

DANGER!!

(6a+)

6b

60 metres  
to the ground

5+

5

28 metres  
to the ground
